

Testing strategy performance in a population

The strategies included are all that match the regular expression. Each strategy is played against all other strategies (including against itself). The results reported are mean values (with approximate 95% confidence intervals) for the scores of each strategy.

Results (10(a|b|c)\$)

Strategy	Mean payoff	95% CI	Mean opp. payoff	95% CI
nzenoug10c	2.720	[2.720, 2.720]	1.512	[1.512, 1.512]
nzenoug10a	2.663	[2.663, 2.663]	1.397	[1.397, 1.397]
nzenoug10b	0.915	[0.915, 0.915]	3.390	[3.390, 3.390]
